# محاسبات ابری

## ارائه یک مدل مفهومی و مطالعه کیفی

### Cloud computing

### A conceptual model and qualitative study

دکتر رضا واعظی

Reza Vaezi

Assistant Professor of Kennesaw State University, United States

چهارشنبه، ۱۵ مرداد ۹۳، ساعت ۱۴ تا ۱۵

دانشکده مهندسی صنایع، طبقه چهارم، سالن سمعی بصری

**Abstract :** “*Cloud computing*” is the new buzz term in the IT industry. Many practitioners have already adopted the technology or are in the process of adopting it. Yet, there is no methodological research investigating the adoption process. In this seminar we review articles and interviews published mostly in practitioner journals to develop a theoretical framework that help us to better understand the cloud computing phenomena. As such, the framework provides a stepping stone for future cloud computing studies.

**Biography :** Reza Vaezi is an Assistant Professor of Information Systems with the Coles College of Business at the Kennesaw State University. He Holds a PhD in Management Information Systems at University of Houston, Bauer College of Business. Before joining the Ph.D. program, Reza completed his Masters of Science in MIS at University of Nevada, Las Vegas. He also holds a B.Sc. in Industrial Engineering from Sharif University of Technology in Iran.
